Rotacaster Dollies

- Less effort is required to balance a load during turning and rotation due to the static load and wheel base relationship reducing the risk of overturning a load and strain injuries
- Swivel casters only change direction when movement is arrested and recreated in the new direction often requiring additional torsional force increasing the risk of strain injuries
- Welded aluminium frame with fixed recessed housed multi directional wheels means no swivel mechanisms or bolts, other than axles to damage or maintain ensuring consistent trouble free performance for the life of the product

600mm x 450mm
